

eBilling & ePayment

The eBilling and **ePay for PayPal** services work together; however, eBilling service can be implemented without the **ePay for PayPal** service. **ePay for PayPal** can be implemented without eBilling.

eBilling

- Provides both convenience for the bill recipient and dramatic cost savings for the biller.
- Allows bill recipients to view their utility bill at a secure web server with an account number and a PIN.
- All eBill recipients that have an email address will automatically be sent an email notification that a new eBill has arrived.
- eBills can be printed and stored physically by the recipient or can be downloaded as a PDF file and stored digitally on the recipient's computer.
- eBills remain online until the next billing cycle of the biller.

ePayment for PayPal

- Permits your customer to make credit card / debit card payments to pay Utility Bills, Tax Bills, as well as any AR invoice for such applications as Animal License, Building Permits, Business Licenses and Code Enforcement.
- Based on the Customer Pays model for paying credit card processing fees, that is, the customer who avails themselves of the convenience of being able to use a credit card pays for the convenience.
- Permits you to download, on your schedule, all payments received over your web site and to automatically post this batch of payments into the appropriate **asyst** module. Your organization receives 100% of the amount due on the customer's bill. No manual entry of payments!
