

Automating Nightly Tasks

Automating Nightly Tasks

All Relational Database Management Systems require maintenance to be performed to keep them running at their optimum. Certain Relational Management Systems have these tools built in. MS Access includes the same type of tools but does not include the ability to automate these tasks. Enter, Total Visual Agent.

- Performing nightly backups is one of the most important tasks that is routinely overlooked.
- Without nightly backups, you may not be able to recover from a disk crash, power failure during a post routine, virus invasion, etc.
- Total Visual Agent gives you the ability to schedule tasks to be performed while you are at home sleeping.
- You can schedule your database to be backed up at midnight and then compacted. This will mean that every morning you can be assured that your data is safe and **asyst** is running at its optimum.
- Total Visual Agent allows you to create up to 99 “Rolling” backups. Using a Rolling Backup strategy means that you will easily be able to fall back to a previously saved version of your dataset if need be.
- This tool is well worth the investment to make sure that you are getting back ups every night and running the **asyst** modules at their optimum level.
