

# Automated Backup

## **asyst:Automated Backup**

**asyst:Automated Backup** provides a convenient tool for automatically backing up your entire **asyst** database. If you have ever suffered through the extra work of rebuilding files after a computer catastrophe, you will appreciate the value of this product immediately.

- No more forgetting to do backups.
- No more extra steps outside of **asyst** to get the job done.
- No more worry about when the backup was done, or which one is the most current version.

**asyst:Automated Backup** make the whole process as simple as a mouse click.

Here is how it works:

- For each computer on which you run **asyst** applications, you install **asyst:Automated Backup** and register it just like any other **asyst** application.
- When each user exits the **asyst** main menu, **asyst:Automated Backup** checks to see if that user is the last user in the database.
- When the last user exits the database, **asyst:Automated Backup** displays a dialogue box asking if the user wants to make a backup of the **asyst** database.
- **asyst:Automated Backup** will create a Zip file of the attached dataset and name it for the day of the week that the dataset is back up. (Monday.zip, Tuesday.zip, etc.) If you use **asyst** everyday and allow **asyst:Automated Backup** to make a backup of your dataset each time you exit **asyst**, you will have a backup for each day of the week. That way, if you find a data problem that was created three days ago, you simply restore the three day old backup and redo the work of the last two days. Multiple backups will help to assure that you do not overwrite good data with data that has been corrupted.
- If you need to restore your **asyst** dataset from one of your daily backups, you will simply unzip the appropriate Zip file and restore it to the drive and directory where the dataset resides.

**asyst:Automated Backup** is a “must have” application for those that want to provide simple and consistent data backup for their important enterprise information.
